

FURUNO

Split-beam Echosounder FCV-38

AFAS2021

2021.11.1

Satoshi Misonoo

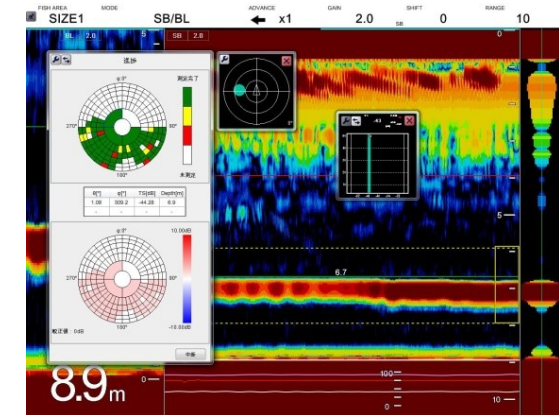

◆ Concept

- Split-beam echosounder with **Stabilized Echograms** and **TS estimation**

◆ Features

- Sphere Calibration Function
- Output **netCDF4** data
- TS histogram and target trace graph
- **Beam Stabilizer**
- Heave Compensation
- Easy and quick operation
- Deep Sea Mode
- **Multi-beam directions**

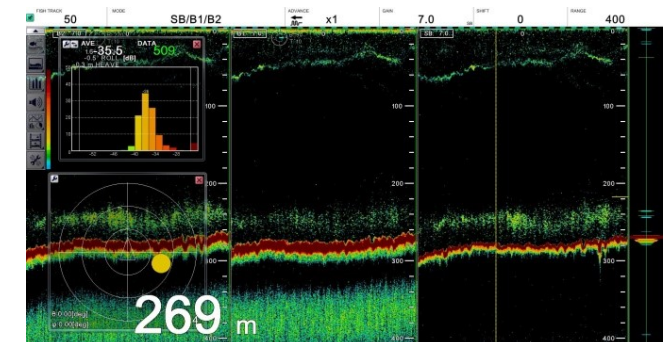

Calibration

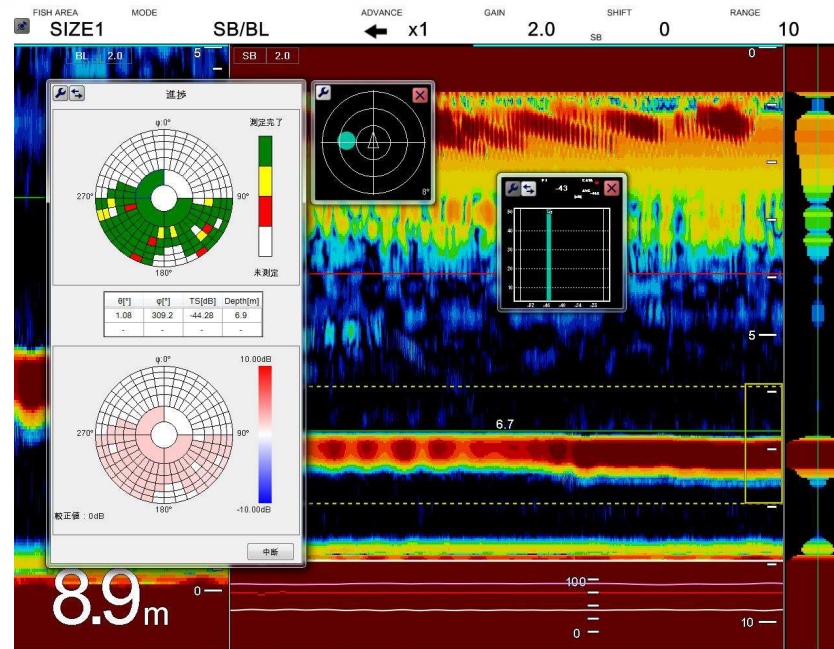

TS graph

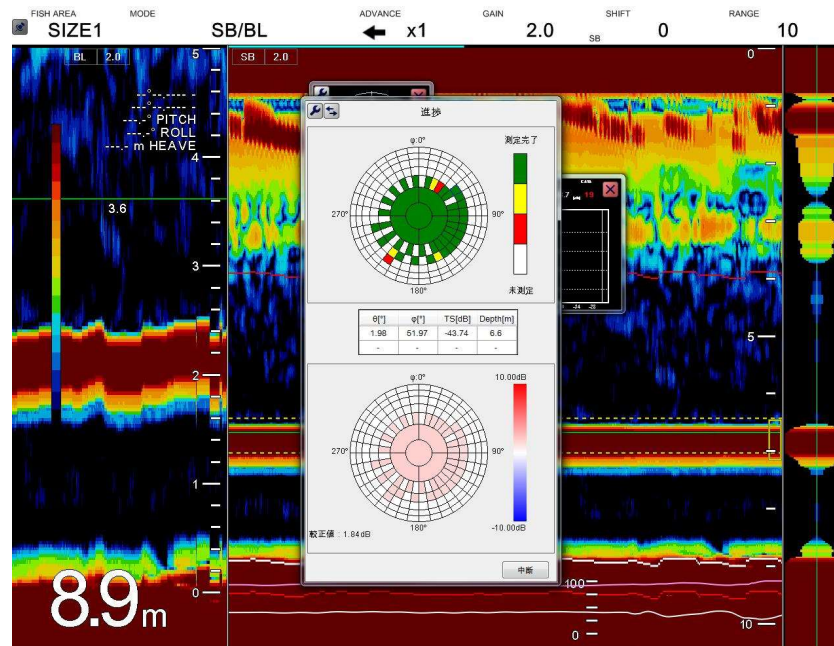

Multi-beam directions

- Two different calibration Mode available
- The “Manual Mode” is the standard method
- The “Auto Mode” is searching the sphere and controlled the beam automatically by beam forming technology

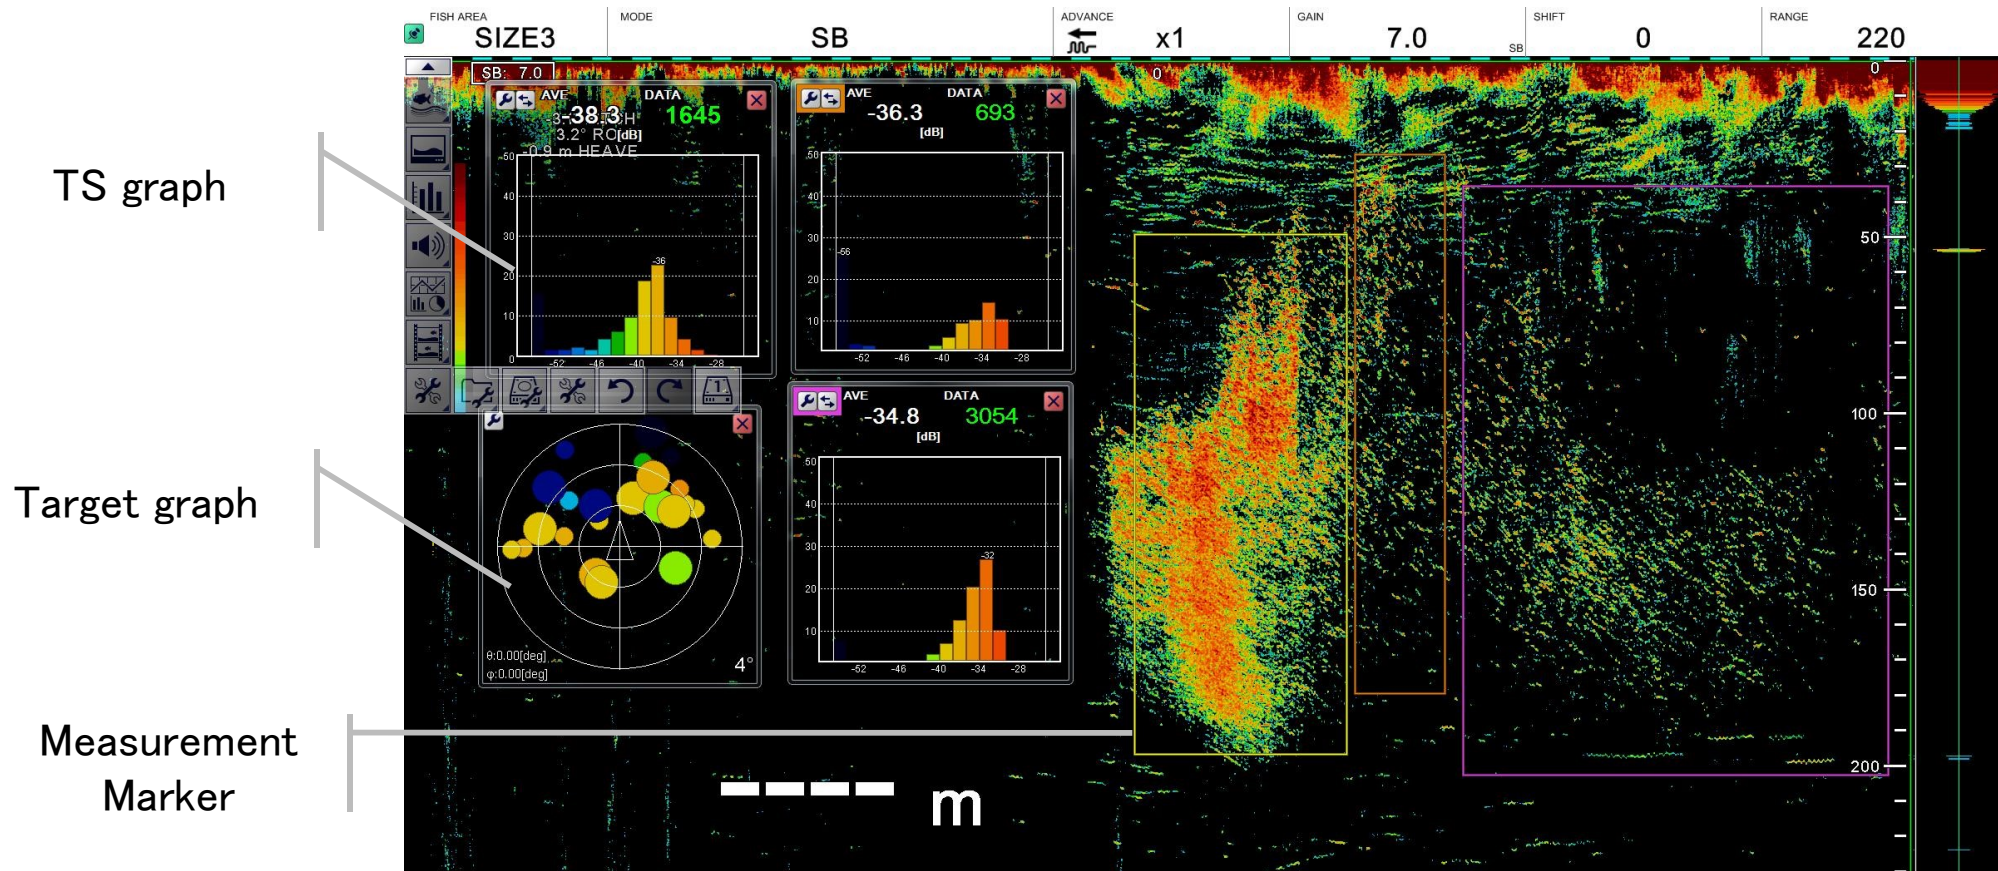

Manual Mode

Auto Mode

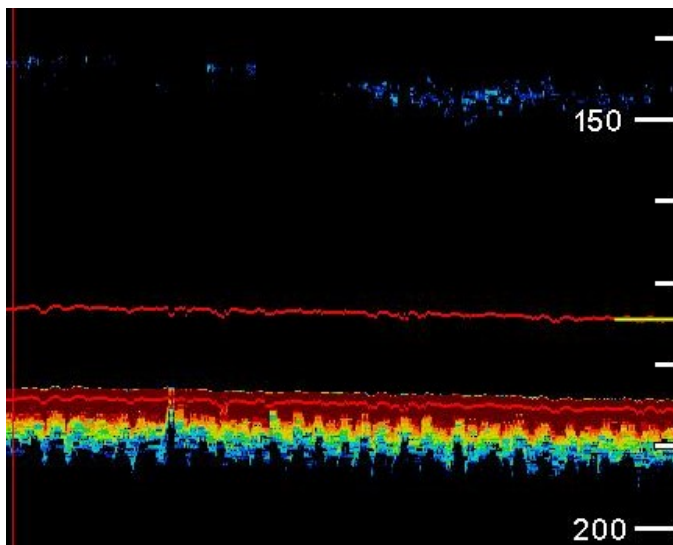

- Up to 3 TS graphs available
- “Target graph” will detect the targets moving

Beam Stabilizer

FURUNO

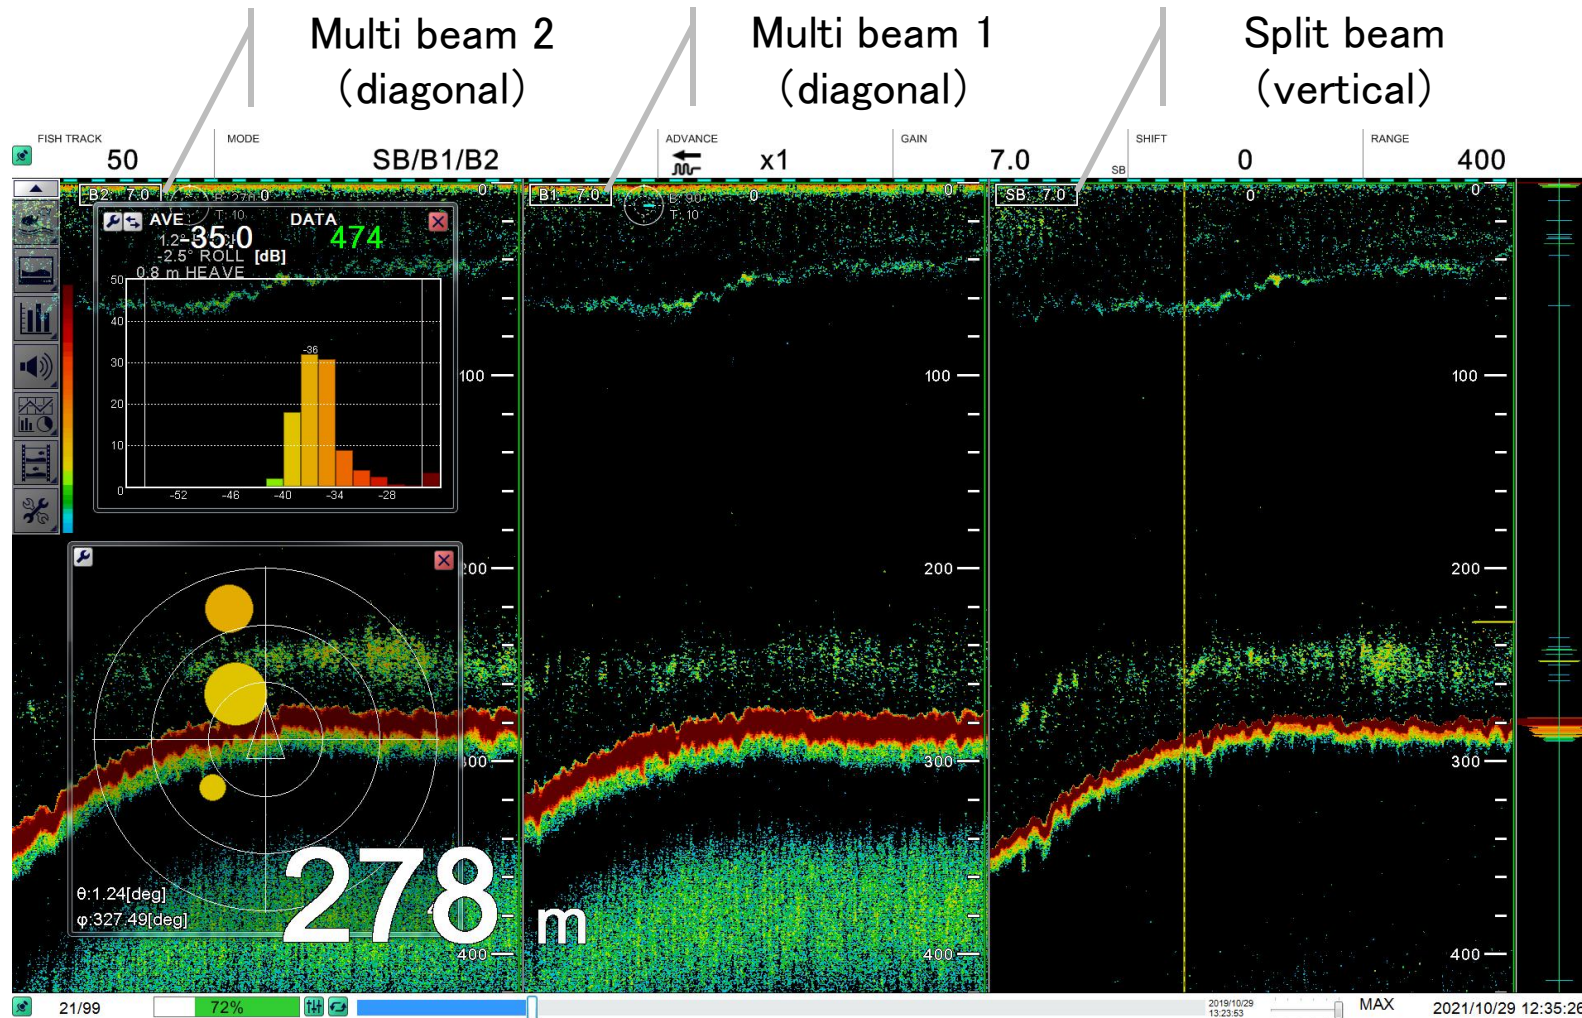

bottom echo

- FCV-38 can stabilize both TX and RX beams independently

Multi-beam Mode

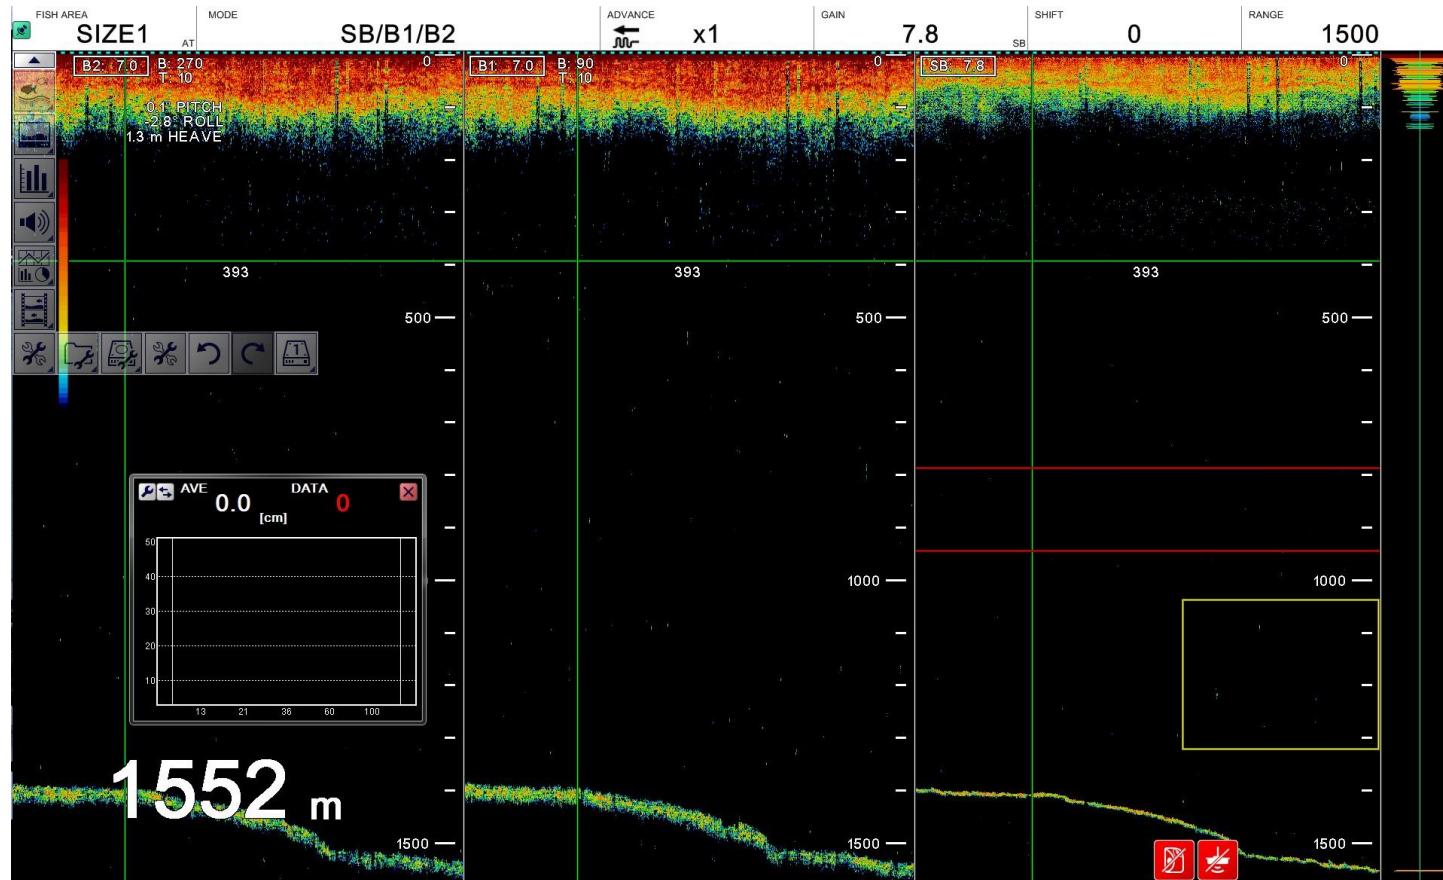

FURUNO

- Up to 5 different beams available
- Selectable tilt angle within 20 degrees

Deep sea Mode

FURUNO

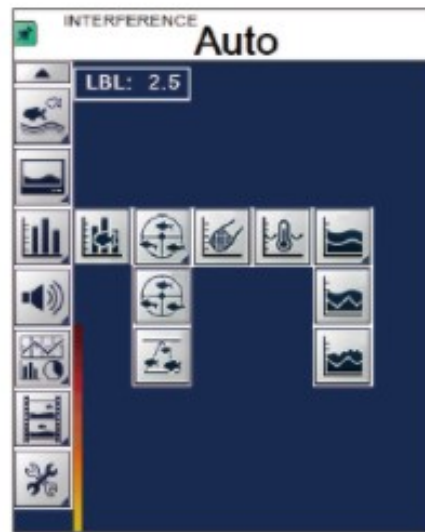

- Long Transmitting Pulse available by “Deep sea Mode”

- Easy and quick operation

Trackball control unit

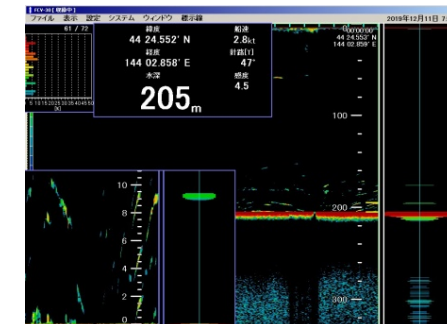

InstantAccess bar™

➤ Comparison with FCV-30(old model)

function	FCV-38	FCV-30
Frequency	38 kHz	38 kHz
Beam Width	7.0°	7.0°
TS Graph	Max 3 Graphs	1 Graph
Beam Stabilization	Yes	Yes
	Built-in Motion sensor	Motion sensor is optional
Heave Compensation	Yes	Yes
Deep sea Mode	Yes	Yes
Multi beam directional	Max 5 beams	Max 5 beams
Record/Play	Yes	Yes
Output Data format	netCDF4	Furuno Original/HAC

- The “Auto Calibration Mode” can get the calibration value automatically
- The recorded raw data by netCDF4 format can be imported into “Echoview[®] 12” for data analysis
- 3 “TS histogram graphs” and “target trace graph” available
- Built-in motion sensor and signal processing provide correct TS in rough sea conditions
- Deep sea detection by “Deep sea Mode”
- 5 different multi-beam echoes are useful to get underwater information
